Methodology

The Art Market analysis presented in this report is based on results of Fine Art auctions that occured between 1st January and 31st December 2020, listed by Artprice and Artron. For the purposes of this report, Fine Art means paintings, sculptures, drawings, photographs, prints, videos, installations, tapestries, but excludes antiques, anonymous cultural goods and furniture.

All the prices in this report indicate auction results – including buyer's premium. Millions are abbreviated to "m", and billions to "bn". The \$ sign refers to the US dollar and the ¥ sign refers to the Chinese yuan. The exchange rate used to convert AMMA sales results in China is an average annual rate.

Any reference to "Western Art" or "the West" refers to the global art market, minus China.

Regarding the Western Art market, the following historical segmentation of "creative period" has been used:

- "Old Masters" refers to works by artists born before 1760.
- "19th century" refers to works by artists born between 1760 and 1860.
- "Modern art" refers to works by artists born between 1860 and 1920.
- "Post-war art" refers to works by artists born between 1920 and 1945.
- "Contemporary art" refers to works by artists born after 1945.

EDITORIAL BY THIERRY EHRMANN

The pandemic which hit the world unexpectedly in 2020 forced the Art Market to accelerate a digitization process that was long overdue.

Twelve months ago the art industry showed a certain disdain for anything connected with digital culture... a disdain resulting in a reluctance to implement efficient IT tools. This reluctance seems to have lasted for almost thirty years, resulting in a cumulative delay for the whole sector. But not entirely... because during all of this time Artprice has been exploring the digital possibilities inherent to the Art Market with conviction and creativity, substantially preparing the ground for what was simply inevitable.

And so – despite the massive difficulties associated with the pandemic – it has been with tremendous enthusiasm that our company has supported all players in the Art Market as they take on the historic challenge of trying to eliminate in a few months (sometimes even a few weeks) the impact of three decades of obstinacy.

The world's major auction houses are today models of adaptability. However it is remarkable to observe that the paradigm shift seems to have reached all of the market's players, local and international, large and small. They all appear to have agreed to enter the digital era irreversibly by dematerializing large

segments of their operations. As is often the case, the private sector has shown much greater flexibility and inventiveness than public institutions.

The Art Market has now constructed the framework for a new economic model and reached a new equilibrium that the most op-

timistic projections weren't expecting before 2025. It is now much better equipped for this 'other way' of living and collecting... that of the digital 21st century.

With this 24th Annual Art Market Report, Artprice and its exclusive partner Artron are proud to provide a free global analysis of this long-awaited transformation.

EDITORIAL BY WAN JIE

The particularly exceptional year of 2020 took a serious toll on the art market around the world after the outbreak of COVID-19. This was especially true in the first half of the year, when most offline activities were cancelled, and the art market in China came to a standstill at one point.

To deal with this unexpected change, the Chinese art market rose to the occasion after a short period of adaptation and adjustment. Online resources were immediately activated for art exhibitions, primary market galleries, as well as secondary market auctions, to be brought online within an extremely short period of time. The internet played a significant role in the Chinese art market in the first half of 2020.

In the face of this crisis, the Fine Art auction market in China has resorted to strategies supported by years of accumulated experience and the development of the Internet. Nowadays, we live in a highly digitized era, where networking and digital intelligence have become key due to China's economic development. This has raised the intelligence

level of society and empowered all professions and trades. The digital economy is fast becoming a new engine that drives China's economic growth.

As an important force in the Chinese art market, Artron Art Group is willing to work with partners with shared goals in the art industry

worldwide. We are willing to seize the trends of the times and make contributions to the application of art data.

GEOGRAPHICAL BREAKDOWN OF THE ART MARKET

After a period of lethargy that gave way to a sharp contraction, the art market has experienced a rebound led by auction houses that managed to pursue their activities throughout the worst of the health crisis. In reality, the results for the year 2020 are extremely encouraging given the unprecedented context.

Key figures

The secondary art market is currently proving to be much more resilient than in previous crises, notably that of 2009 when global

Fine Art auction turnover dropped 36%. In 2020, it fell just 21% (down to \$10.57 billion), a surprisingly small contraction given the impact of the Covid-19 crisis on the Art Market as a whole (galleries, museums, fairs, etc.).

The 2020 contraction was mainly linked to an understandable loss of momentum at the high-end of the art market. From the first lockdown, lots of major collectors decided to postpone their sales until better times.

The result is that more than 500 results above the million-dollar line were absent in 2020 and the number of lots in this category fell by a third compared with 2019. In the West, the results have been greatly affected by a short supply of masterpieces, with a 30% contraction in annual turnover, despite a stable number of transactions. In contrast, China's turnover rose slightly (+2%) despite a sharp drop in the number of transactions (-40%), thanks to a number of high-level sales during the second half of the year.

TURNOVER BY COUNTRY (TOP 5)

Reactions differed from one country to another in this first year of the health crisis. In France, the UK and the United States, turnover dropped between -30% and -39%; but in China (+2%) and Germany (+11%) the figures actually improved, despite a more limited supply. China regained its leading position in the world on the back of some major sales of Old and Modern works in the second half of the year.

BREAKDOWN OF TURNOVER AND LEADING AUCTION HOUSES IN ASIA (2020)

Asia: Number 1

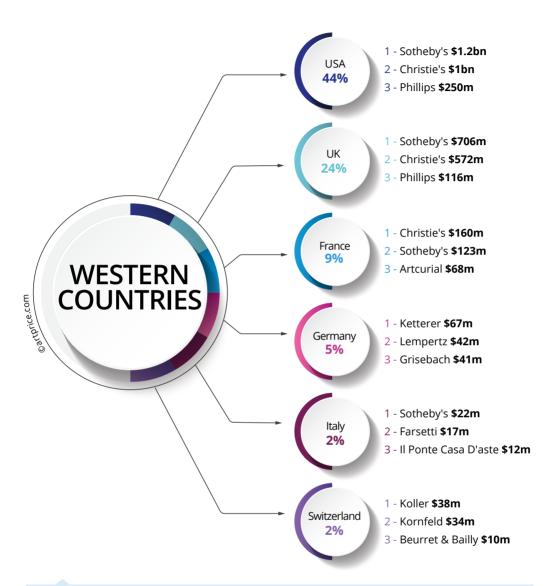

The first continent affected by the coronavirus, Asia enjoyed a strong resumption of auction activity during the second half of 2020.

With a cumulative total of nearly \$1 billion, Poly International and China Guardian accounted for a third of the market in mainland China. We also note a spectacular breakthrough by Yongle Auction in Beijing, with more than \$360 million in revenue.

Sotheby's was nevertheless the continent's leading vendor from its salesroom in China Hong Kong, taking more than \$563 million in 2020, the best Fine Art turnover total in all of Asia. China Hong Kong now represents a vital part – almost a quarter – of Sotheby's global Fine Art turnover.

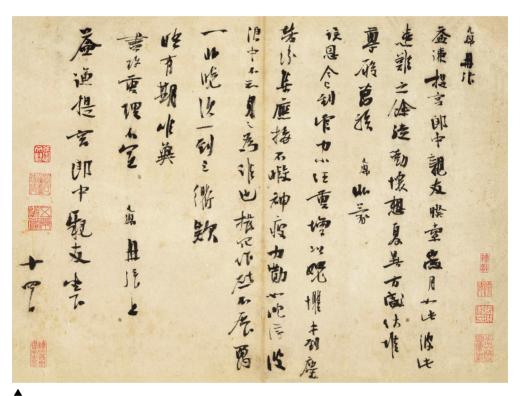

THE WEST'S LEADING AUCTION HOUSES: SOTHEBY'S AT THE TOP...

After several weeks of uncertainty and adjustment, the majors Sotheby's, Christie's and Phillips returned to proposing prestigious artworks at the beginning of the summer of 2020. On 29 June, Sotheby's sale of a Francis Bacon triptych for \$84.5 million substantially restored market confidence.

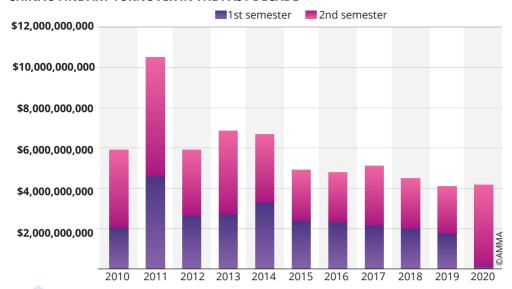

At the end of the year, Sotheby's still retained a significant lead on the American market and was the leading auctioneer in both the UK and Italy. Number 1 in France, Christie's, together with Sotheby's and Artcurial, are the only auction houses in France generating an annual turnover above \$5 million. Together, the three houses account for almost two-thirds of the country's Fine Art auction turnover (61%).

In terms of the Western secondary art market as a whole, Sotheby's and Christie's account for approximately 60% of the proceeds from sales of artworks (with a combined annual total of \$3.7 billion).

ZHU DUNRU - *Running and Cursive Script Calligraphy* **\$22.9 million** - 1 December 2020 - China Guardian, Beijing

CHINA'S FINE ART TURNOVER IN THE PAST DECADE

After a catastrophic first half in China, sales of artworks accelerated considerably in the second semester, ending with a slight increase for the year as a whole versus 2019 (+2%).

Artprice: China has once again become the world's leading market in 2020, with 39% of the global auction turnover, far exceeding that of the United States (27%). How will China remain in this leading position throughout 2021?

Gong Jisui: Consultant of Artron Art Market Monitori of Artron (AMMA): Likely, the prosperity of the Chinese art market will continue to increase. Continuous adjustments will be made to develop each segment (category, period and price range) of artworks. Prices of traditional artworks could likely rise or fall, but prices of artworks by young artists should rise even more. Prices of modern and contemporary Chinese artworks, that have already reached their peak, will likely continue to adjust. The odds of seeing very rare traditional Chinese artworks will become lower and lower. Once they appear at auction, their prices will remain high. Therefore, prices of Chinese artworks are very likely to remain stable. The auction scale and the collectors' enthusiasm in the Chinese art market can only continue to rise. However, the artworks collected by the new generations of collectors will inevitably change. More and more young collectors, born in the 1980s and 1990s, will soon join the art market.

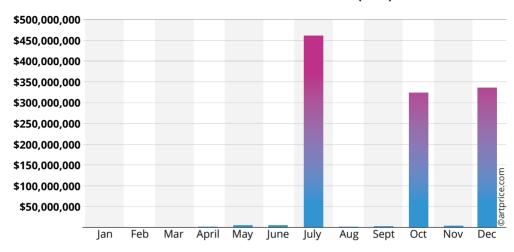

Asia and the West

The performance of China's art market is remarkable: despite a 40% drop in the number of lots sold, its turnover grew 2% to reach \$4.16 billion. China therefore accounted for 39% of the global art market in 2020, almost as much as the United States (27%) and the UK (15%) together.

Artprice: The Fine Art auction turnover in China has increased by 2% (from \$4.1 billion in 2019 to \$4.16 billion in 2020). Under the spread of the Covid-19 pandemic early this year, how can this be explained?

AMMA: There are probably four reasons. First, the strong purchasing power in the art market mainly belongs to a minority of people in society, namely the high-net-worth individuals, whose purchasing power has not been severely affected by the pandemic. Secondly, although the total Fine Art auction turnover has not evolved much compared to 2019, the content of auctions has changed: the most exquisite items were still sold at auction this year, but the volumes of general lots has been severely affected. Thirdly, due to the influence of the pandemic, some collectors who have come under financial stress or needed to adjust their collections have had a

MONTHLY ART AUCTION TURNOVER IN CHINA HONG KONG (2020)

propensity to sell some of their works. They have become suppliers of the auction houses and have sometimes offered great master-pieces. Finally and most importantly, due to the policy of printing money in many countries in 2020, art enthusiasts among high-networth individuals are willing to turn their cash assets into cultural goods and artworks.

Two contrasting semesters...

The first lockdown upset the ecosystem of an Art Market dependent on the circulation of visitors, artworks and collectors. The sudden interruption created a substantial economic imbalance between the two halves of the year.

During the first semester, the paralysis (postponements and cancellations) of auctions generated very substantial turnover shortfalls (vs. the year earlier period) of approximately 60% in the West and 91% in China; but a surge in demand was quickly felt. Already at the end of June, Sotheby's managed to generate \$231 million during its Contemporary Art sale, and then \$194 million from its De Rembrandt à Richter sale at the end of July. On 7 July Christie's bounced back with ONE: A Global Sale of the 20th Century that generated close to \$300 million. In China Hong Kong, the month of July was the most dynamic of the year. During these highlights of the year Sotheby's sold Francis Bacon's Inspired by the Oresteia of Aeschylus for \$84.5 million; Christie's sold Roy Lichtenstein's Nude with Joyous Painting for \$46.2 million and Sotheby's China Hong Kong hammered San Yu's Quatre Nus at \$33.3 million. Each of these results represented the artists' third best-ever sales result.

After the initial shock of the pandemic, the autumn and winter sessions became decisive. Fortunately, by then, auctioneers had enough time to react and buyers were once again disposed to submitting generous bids. For example, on 6 October in New York, Christie's hosted the most profitable sale of the year (20th Century) generating \$309 million. In December, the success of its China Hong Kong sales of Modern & Contemporary Art produced a new record for "Christie's Asia" (at \$224.7 million). The market's dynamism was evident until the last days of the year and the momentum propelled the H2 totals beyond those obtained in H2 2019, with a 7% increase in the West and, above all, a 71% increase in China.

Artprice: The auction turnover in the second half of 2020 only accounted for 96% of the total annual auction turnover. How did Chinese auction houses complete almost all of the auctions for the entire year in just 6 months?

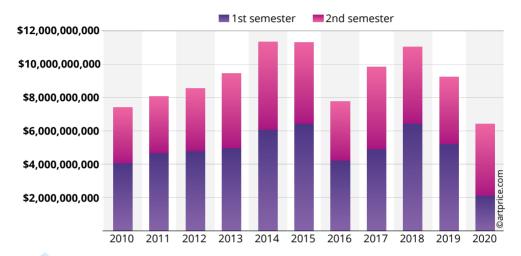

AMMA: In terms of the Chinese art market's schedule, long preparations are required for each season's auctions in advance. Auction houses, whether in China or overseas, completely stopped auctioning off items in the first half of the year, but they were mainly making preparations for the auctions to

come in the second half. Therefore, almost all items for the entire year were sold through auctions in the second half of 2020. As the Chinese art market has been in operation for a long time now, the number of consignments and the total auction turnover have shown great inertia. On the one hand, this reflects the liquidity of the Chinese art market. On the other hand, it shows that many auction

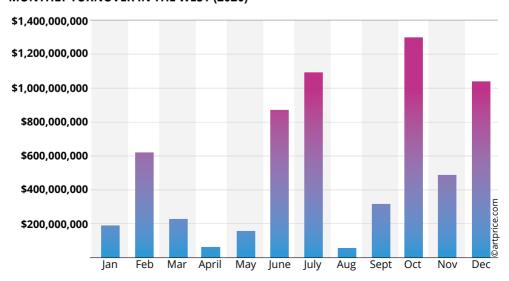

houses have made great efforts to mobilise all their available resources in the second half of the year. The pressure has been greater than ever before and their high-intensity workload and relationship with customers has put more stress on them than ever before.

ANNUAL AUCTION TURNOVER TOTALS IN THE WEST

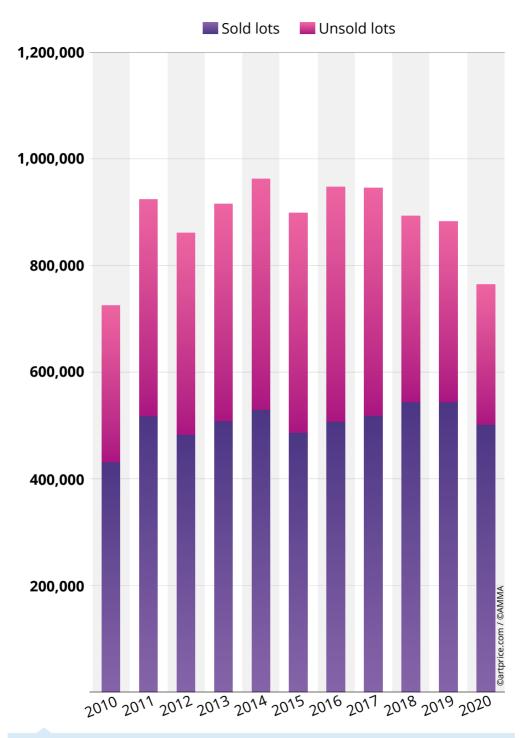

The pandemic had a strong impact on the West's secondary art market (-30%) despite a stable number of lots sold (468,000) compared with 2019. The American market posted the heaviest losses. Its annual result was down \$1.8 billion versus the previous year with the number of works fetching over \$10 million almost halved in New York (30 vs. 58 in 2019). Following the contraction of its high-end market, the United Kingdom also posted a substantial turnover shortfall (down \$653 million).

MONTHLY TURNOVER IN THE WEST (2020)

EVOLUTION OF SOLD AND UNSOLD LOTS

In total, 2020 lost 130,000 works from the art supply chain (down 14%) compared with 2019. However, thanks to attractive estimates and strong demand throughout the year, the unsold rate fell to 34% versus 38% in 2019.

WHAT'S CHANGING?

The Covid-19 pandemic forced the art world to a screeching halt. To minimize their losses, auction operators focused their efforts on digital solutions that became the only viable vector for the promotion and sale of artworks after the freeze on face-to-face contacts. In short, an emergency situation pushed the Art Market into an unprecedented digital revolution.

A pivotal year for online sales

In 2020, "remote" auctions became the new norm, with some vendors going the whole distance by offering "Online only" sales (i.e. without an auctioneer). Many buyers were already used to bidding remotely, but during the first lockdown there was a sharp increase in connections with a larger, younger audience and an influx of new bidders. Naturally, the more there are online connections, the greater the competition. The very positive sales rate (76%) resulted from this renewed audience base coupled with attractively priced estimates.

In 2020, Christie's generated a 262% increase in online sales and Phillips' online sales rose by 134%. However, the "transition prize" goes to Sotheby's, which reacted very quickly to the pandemic under its new management team set up in 2019 by Patrick Drahi. Its online sales had already increased 25% in 2019... but the increase announced at the end of 2020 was around +440%, all segments combined. Over 70% of the auctions hosted by the American auctioneer took place on Internet last year (versus 30% in 2019), with over 40% of their online bids placed by new bidders.

Sotheby's took a substantial lead already in April, with a Contemporary Art sale in China Hong Kong that was originally planned as a live sale but subsequently switched to online. The sale was remarkably successful generating almost double its combined-lots high estimate. Nearly half the works were priced under

\$5,000, with ultra-popular signatures such as Kaws, Fairey and Murakami represented in lots involving little risk (but generating little margin). A few days later, Sotheby's obtained the highest price ever paid for a painting in one of its online sales: \$1.3 million for a work by Georges Condo (Antipodal Reunion, 2005). With that sale Sotheby's proved that online sales are also suitable for the high-end market.

Live and / or online: what are the differences?

Live sale

This is the most common auction format: a classic sale in an auction room, very often broadcast live on the Internet. Buyers can bid on the spot, by telephone and, increasingly, "online".

Live, behind-closed-doors sale

A sale hosted by an auctioneer, but not open to the public. The works cannot be viewed physically and all bids are made online.

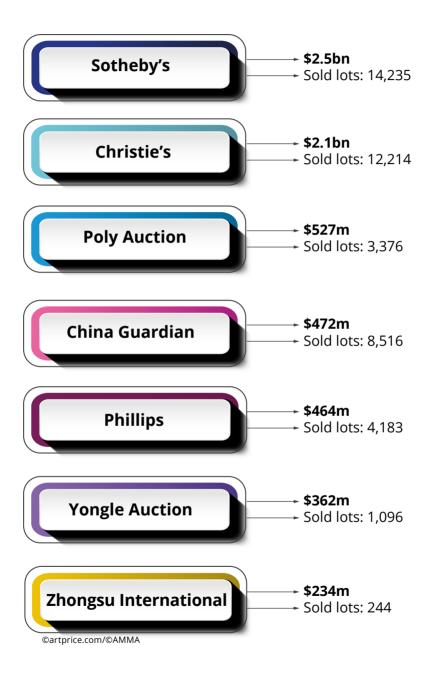

Online only sale

In this format, there is no auctioneer; everything is automated on the Internet. The bids rise gradually until the end of the allotted period when the highest bid wins the lot. The process is relatively relaxed because it takes several days.

Artprice: Due to the lockdown and quarantine triggered by the COV-ID-19 pandemic, many auctions are conducted online. Compared with 2019, could you estimate the total online auction turnover in 2020?

AMMA: Since there is no systematic and reliable data yet, it is difficult to assess. But it is clear that, since last year, the total online auction turnover has accounted for an increasing proportion in the overall art market. The Internet has created a new purchasing channel and changed consumption habits, impacting more effectively the sales of luxury goods and the low-end art market. However, the highend art market still relies on a combination of online and offline sales. The main reason is that an artwork is not a standard industrialised product. Paintings differ from one another by their techniques, materials and way of expression, as well as their provenance. Their extremely unique nature as non-standardised commodities has created obstacles to online only sales. However, due to the long

MOST SUCCESSFUL AUCTION HOUSES (2020)

running pandemic and the participation of younger generations, who are used to online shopping, the sales of luxury goods and mid-to-low end artworks will likely grow greatly among the total online sales.

The most successful auction houses

Despite their speed of reaction, the main auction operators were unable to completely offset their earlier losses. Sotheby's Fine Art sales activity ended the year down 29% with \$1 billion missing from its books versus 2019. Christie's, ended down 41%, with a shortfall of \$1.5 billion versus 2019.

Christie's performance was strongly affected by a lack of prestige works, but also by a slower adoption of online sales compared with its rival under Patrick Drahi's direction. By the end of the year Christie's volume of transactions was down 20%, with a shortfall of 3,000 lots versus 2019.

With a total \$2.5 billion of artworks sold around the world, Sotheby's has regained the advantage over its principal competitor. The firm has benefitted from the speed with which it switched a maximum number of sales to the online format and its volume of Fine Art transactions remained stable versus 2019 (more than 14,000 lots sold). Sotheby's also hammered the best result of the year with a work by Francis Bacon fetching over \$84.5 million.

Despite a 20% drop in turnover, Phillips ended the year not far behind China Guardian and consolidated its place in the high-end market. The high point of the year for Phillips came on 7 December – a historic day for its Contemporary Art Department – with a sale that took \$134.6 million, including \$41 million for a David Hockney landscape (*Nichols Canyon*, 1980).

The transformation of auction houses: technology and diversity

Auction houses have been developing digital tools and content to promote their works and expand their reach for quite some time, but faced with the pandemic and social distancing they have substantially accelerated the movement. Among the most common tools nowadays are virtual 3D tours along with high performance videos and applications that allow potential bidders the chance to view the smallest details of the lots offered via ultra high definition images (at Christie's, Sotheby's, Phillips, Artcurial among others). In sum, the auction world has dramatically improved its online shopping experience and has taken a huge leap into the future.

Another area of innovation has been the broadcast of live sales from several countries. Christie's innovated with its *ONE* sale during which four auctioneers took bids simultaneously in China Hong Kong, Paris, London and New York (the sale generated \$420 million on 10 July 2020). Various other 'relay' sales took place during the autumn with broadcasts from London-Paris and China Hong Kong-New York. These first sales without live audiences actually attracted very large audiences, and they also successfully maintained the adrenaline despite their remoteness.

Other changes adopted during the pandemic have also impacted the economic model of auction houses. For example, they have reduced the production of one of their primary historical tools: paper catalogues. Sotheby's actually stopped the production of catalogues in 2020, thus saving a lot of printing and mailing costs. Another corner that has been cut is in the field of art transport; works are travelling less. In the absence of physical exposure, they no longer need, a priori, to be gathered in the same place before being dispersed. The sale of a work consigned in Milan could, for example, be organized by a London branch. In short, a more flexible organization is beginning to take shape, and it should allow time to be saved and a natural reduction in very high transport and insurance costs.

Saving time and money... winning new customers and enhancing interactivity... a whole series of evolutions that could possibly lead to online purchases supplanting physical sales and even cause the disappearance of auctioneers? Not yet, of course, Although equipped with all the tools to fully digitize transactions, most auction operators are still hosting live auctions. For the time being, most seem to be targeting a hybrid model.

Indeed... the notion of hybridity appears to be playing a role in various aspects of the art market. We can see it for example in new

REMBRANDT - Self-portrait of the artist, half-length, wearing a ruff and a black hat (1632) - [Détail]

partnerships; that of Sotheby's with art galleries (Gallery Network), that of Christie's with China Guardian for a series of sales in Shanghai, or that of Phillips with Poly Auction (which posted a sold rate of 94% on 3 December). Then there are the sales themselves which have become hybrid by mixing the traditional categories (periods) of the art market. If the recipe is not new (da Vinci's Salvator Mundi fetched \$450 million during a Christie's Contemporary Art sale in 2017...), the mixing of genres and eras has never been quite so 'uninhibited' or quite so 'code-breaking': Christie's ONE sales covered all 20th century art in July and December. Sotheby's From Rembrandt to Richter mixed literally all eras in July. A dinosaur (T-Rex) named "Stan" appeared in a prestigious Christie's art sale in October and three Alfa-Romeo prototypes were offered in a Sotheby's Contemporary Art sale the same month. Auction companies are therefore mixing categories in order to appeal to a greater diversity of interests and buyer profiles and to promote market flexibility and optimize their sales.

Artprice: Auction companies now offer more online auctions and thus exposure has increased due to the Internet. Has this helped auction companies to attract new collectors? If so, are they all from China or partly from other countries as well?

AMMA: Online auctions in China mainly rely on the purchases made by local collectors. It is difficult to attract overseas collectors. This is because there are several restrictions. taxations and policies on the cross-border circulation of Chinese artworks. In particular, the export of a traditional Chinese artwork - that is old and important - is prohibited. Therefore, auction sales in Mainland China are not as convenient for international exchanges as those in the Region of China Hong Kong due to cultural policies, customs and taxes. This is because China Hong Kong is a free-trade port, where no import or export taxes are imposed. However, since last year, the United States have imposed a 10% tariff on the imports of Chinese artworks. No matter where the goods are imported from, as long as they are made in China the tariff regulations apply to enter the United States. Therefore, foreign buyers are concerned about taxes, whether they buy Chinese artworks from Mainland China or the Region of China Hong Kong.

ART BEST SUITED TO DISTANCE SELLING

Remote buying has been adopted by collectors with various profiles and all categories of art seem to be suitable. Some, however, lend themselves particularly well to remote transactions.

Typology of works sold

The restrictions imposed by the health crisis have generated new constraints and appear to have impacted the typology of works sold. Buyers have focused on lots generating a minimum of financial risk, low logistical costs (transport, insurance) and offering little chance of non-conformity with the image(s) in the catalogue. Perfectly matching these criteria, prints and photographs are the only categories where transactions increased in 2020 (+2%). Carried by very fashionable Contemporary editions, typical of "pleasure-buying", prints come out the big winner with more than 111,000 lots sold during the year, which actually represents an all-time record. For the first time, the prints medium generated as many transactions as the drawing medium (23% of transactions) on the global market.

Sculptures, on the other hand, have been somewhat neglected (transactions in this category contracted 8% in 2020), especially large-scale works that involve heavy logistics, not to mention the obvious requirement of inspecting them from every angle before acquisition. There were a couple of major sales (including a large Calder mobile, *Mariposa* (1951), which fetched \$18.2 million at Sotheby's on 8 December), but, all in all, sculpture remains the most negatively affected medium by the crisis, with a total turnover of just \$726 million, down almost 40%.

Most sought-after periods and styles

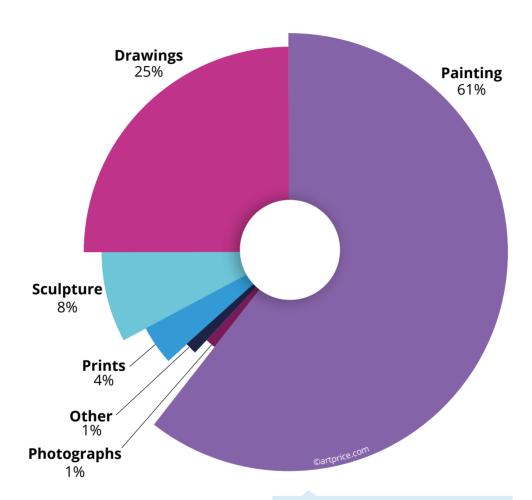

Against the backdrop of a generalised fall in transactions (-7%) on the global secondary art market, Picasso, the world's best-selling artist, generated nearly \$245 million from the sale of 3,400 lots in 2020, clearly confirming the Spanish artist's invincible market status. Elsewhere, Old Masters were markedly perceived as safe investments throughout the health crisis (lots sold were up 7%), while Contemporary art gained new buyers during the lockdowns (+3%). These two periods of creation were the most popular of the year, and both reached a record number of transactions.

Old Masters

Old Masters generated exceptional results on all marketplaces: \$5.2 milion for Georges de La Tour in Cologne (Lempertz); nearly \$17 million for Giovanni Battista Tiepolo in New York (Sotheby's); \$18.8 million for Rembrandt in London (Sotheby's); \$39.5 million for Ren Renfa in China Hong Kong (Sotheby's), and a massive \$76.6 million for Wu Bin in Beijing (Poly International).

Rich with historical art and constantly fueled by new discoveries, the French market attracts interest from international buyers. In Paris, Chinese collectors paid a high price for portrait painter Nicolas de Largillière's La belle Strasbourgeoise (\$1.8 million at Christie's) and La Madeleine penitente by Leonardo da Vinci's "favorite", Andrea Salai, fetched \$1.6 million at Artcurial. Indeed, new records were hammered throughout France where there is no shortage of masterpieces. In Bordeaux, the auctioneer Briscadieu attracted various European collectors to a painting by Alexandre-François Desportes, which finally sold for \$2.4 million at 10 times its high estimate, dwarfing the artist's previous record set in New York (\$850,000, Sotheby's, 1995). This confirmed an already apparent trend: the masterpieces that are scattered throughout France obtain excellent results when they emerge for sale, including outside Paris.

AUCTION TURNOVER BY MEDIUM/CATEGORY (2020)

Overall, the major creative categories more or less retained their respective market shares, whereas turnover contracted quite sharply for sculpture (-38%), painting (-30%) and drawing (-25%). The main problem seems to have been a lack of masterpieces: the number of lots priced above the million-dollar threshold fell by 31%.

Artprice: The best auction record in China in 2020 was set by Wu Bin's (c. 1568-1620) Ten Views of a Lingbi Stone. The work was sold for \$76.6 million by Beijing Poly International Auction Co., Ltd. On 18 October. It has been reported that the previous owner bought the work for \$1.21 million in the 1980s. How do you explain the spurt in its price?

AMMA: Ten Views of a Lingbi Stone is a grand masterpiece in the history of Chinese art, and it is one of a kind. Wu Bin's painting technique is different from all other painters. He broke through the conventions of traditional paintings in the way he expressed the mountains and rocks, and his use of pens and inks to paint realistic objects. He also referred to the principles of geometry, rhythms, and the theory of the five elements. We can say this work is a classic legend. It sold for \$1.21 million in the 1980s, but this does not mean that it was only worth that amount. Since the economy in China had not resumed yet at the time, Chinese collectors were not able to bid for any auction items of much more than \$1 million. The same artwork though fetched \$76.6 million this year, which indicates the rapid development of the Chinese art market and the sharp rise and strong purchasing power of Chinese collectors after the rapid growth of the Chinese economy. In addition, it also reflects the return and recognition of classic Chinese artworks. Due to the rarity and irreproducibility of ancient classic paintings and calligraphy from China, their prices at auction are becoming increasingly expensive, which is inevitable.

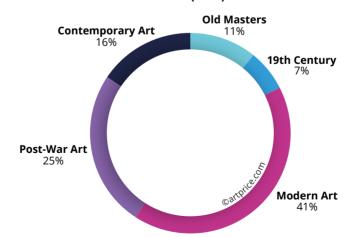

As far as Post-War and Contemporary Art were concerned, the global art market followed a certain number of clear trends, with substantial preferences for Street Art on the one hand, and important works by major abstract and figurative painters on the other.

Figurative Painting

The high-end market remained buoyant for lively, cheerful and daring figurative painting. There were third-best results for Roy Lichtenstein and David Hockney, new records for William Copley, George Condo and Nicolas Party and there was evermore intense demand for works by Magritte (who enjoyed a record number of transactions and his lowest ever unsold rate).

One signature stood out very clearly in 2020: the Sino-French artist San Yu, the second most successful artist of the year after Pablo Picasso. There was no new record for San Yu in 2020, but his works fired up sales in China Hong Kong with *Quatre nus* fetching \$33.3 million at

AUCTION TURNOVER PER CREATIVE PERIOD (2020)

The relative shares of turnover from Modern, Post-War and Contemporary Art were perfectly stable vs. 2019. Only Old Masters showed growth, perceived as a particularly safe investment in 2020.

Sotheby's (\$31.2 million more than at Christie's China Hong Kong in 2005), his *Goldfish* selling for \$21.9 million (88 times its first sale price at Sotheby's Taiwan in 1997) and his *Chrysanthèmes roses* attracting a bid of \$17.8 million (versus \$420,000 at Christie's China Hong Kong in 2005). This latter canvas, measuring 90 cm, exceeded by \$5 million a 4-metre triptych by Zao Wou-Ki presented at the same sale (01/15/82), which fetched \$12.2 million.

Demand was also very intense for 21st century figurative paintings, especially those that evoke themes of racial and sexual identity, gender and, notably, 'queerness' (see "Revelations of the Year").

Artprice: Artist Zhou Chunya's Spring is Coming (China Guardian, 17 August 2020) set an extraordinary record of \$12.4 million, which is \$10 million higher than its lowest estimate. Why is this painting so coveted?

AMMA: An art collection usually reflects both ethnic and regional origins, but also a specific aesthetic tradition and recognition. Prolific artists are likely to fetch higher prices, as their numerous works stimulate the market's demand as well as the competition. And Zhou Chunya is definitively one of them. His great creativity has fostered many collectors' demand for his works. His art inherits the traditional Chinese freehand painting style while breaking through the restrictions of realistic paintings. Instead of expressing the aesthetics of representation, he expresses his understanding of traditional Chinese aesthetics. Zhou Chunya deserves the high price fetched by his Spring is Coming, which can be explained by his worldwide popularity as well as the global evolution of the price of his works. In addition, this piece is a special and rare painting among his early works, so it has an important place in his career. Acquiring this particular work is crucial for collectors to show Zhou Chunya's complete creativity process and also his own development.

Street Art

Kaws, Shepard Fairey and Banksy are still in the top 10 of the best-selling artists in the West and their success is growing with the arrival of new online buyers. In these times of market contraction, the acceleration of Banksy's sales is remarkable (in 2020 nearly 900 works by Banksy were sold – a new record). His high-end market is also doing singularly well with no less than seven results above the million-dollar threshold in 2020, including one close to \$10 million (Show me the Monet, Sotheby's London, on 21 October). In statistical terms, Banksy was the 20th most successful artist in the world in 2020 with a turnover of \$63.5 million vs. \$28 million in 2019, ahead of both Miro and Giacometti. The extraordinary sales of works by Shepard Fairey and Space Invader, as well as the sensational arrival of Mr Doodle on the Japanese market, confirm the rapidly growing success of Street Art.

Abstraction

On the market for abstract art, the major names of the 20th century are still attracting big money: Rothko, Newman and Twombly all fetched results above \$30 million. Joan Mitchell hammered her second best auction result for La Grande Vallée VII (1983), a diptych that fetched \$14.5 million, i.e. 44 times what it sold for in 1989 (\$330,000). Zao Wou-Ki (the world's 3rd most sought-after artist with a turnover total of \$158 million), Gerhard Richter (12th in the world) and Chu Teh-Chun all posted excellent annual totals. Interestingly, Chu Teh-Chun set a new record at the \$15 million level in China Hong Kong, overtaking the first French abstract master of his generation, Pierre Soulages. Other artists are also breaking through, including Georges Mathieu, brought into the limelight by the Perrotin and Nahmad galleries. His monumental Souvenir de la maison d'Autriche offered at Christie's China Hong Kong in early December fetched a record price of \$2.2 million.

Artprice: On 16 October 2020, contemporary artists Mao Yan (Su Tong/Chang Jin/Lu Yang/Li Xiaoshan that fetched \$4.6 million) and Wang Xingwei (Post-85s Looks that fetched \$4.7 million) broke the auction record of \$4 million at Beijing Poly International Auction Co., Ltd. Is there a new impetus in the Chinese contemporary painting market?

AMMA: Both Mao Yan and Wang Xingwei were born in the 1960s and are representative of the Chinese contemporary art scene. The intensive circulation of the artworks made by

OLD MASTER TURNOVER AND PERCENTAGES BY MARKETPLACES (2020)

GLOBAL TOP 10 OLD MASTERS (2020)

	Artist	Artwork	Price	Date / Auction house
1	WU Bin	Views of a Lingbi stone	\$76,579,560	18 Oct 2020 Poly Auction, Beijing
2	REN Renfa	Five drunken princes returning on horseback	\$39,552,130	8 Oct 2020 Sotheby's, Hong Kong
3	ZHU Dunru	Running and Cursive Script Calligraphy	\$22,922,000	1 Dec 2020 China Guardian, Beijing
4	REMBRANDT VAN RIJN	Self-portrait of the artist, wearing [] (1632)	\$18,840,265	28 Jul 2020 Sotheby's, London

10	Jan Davidsz DE HEEM	A banquet still life	\$7,746,199	15 Dec 2020 Christie's, London

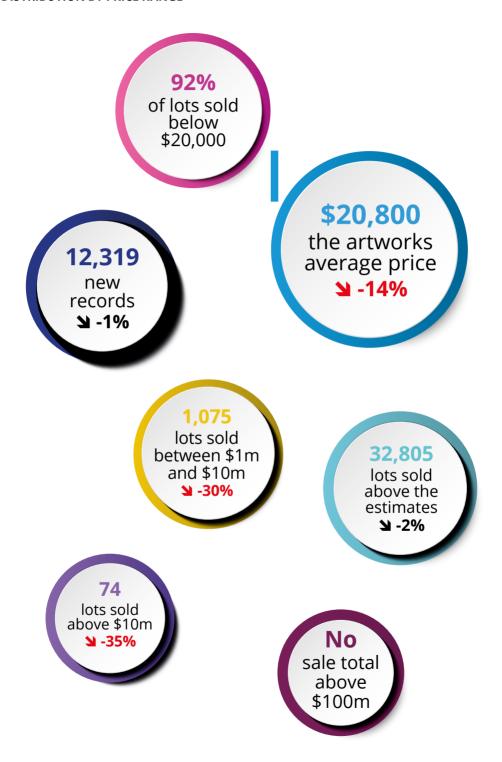

this generation of painters can fully support the sustainable development of the Chinese art market. Therefore, the prices of their works have gradually risen, due to the popularity of their aesthetics on the one hand, but also the general rise of the Chinese art market on the other hand. In addition, due to the intervention of art agents in the Chinese contemporary painting market and due the changes in tastes of collectors, the prices of contemporary paintings will likely exceed those of traditional paintings. This is also supported by the greater number of contemporary artworks available.

Price range

From the bulimic collector to the first-time buyer recently seduced by online sales, pleasure-purchases dominated the auctions this year. Over 80% of the transactions involved works purchased under \$5,000. In fact, this attractive and risk-free price segment of the market was the only one that posted an increase in 2020, up 3%.

Moving up the price ladder, the structure of the "intermediate" market was maintained with 96% of transactions involving works un-

DISTRIBUTION BY PRICE RANGE

ZHOU CHUNYA - *Spring is coming* (1984) **\$12.4 million** - 17 August 2020 - China Guardian, Beijing

der \$50,000. The high-end market was the only price bracket to have really suffered: the number of million-plus works (in \$) fell by 31% despite a recovery at the end of June after a four-month vacuum. By the end of the year, some 1,149 works had fetched prices above the million-dollar threshold in 2020, twice as many as during the previous crisis of 2009.

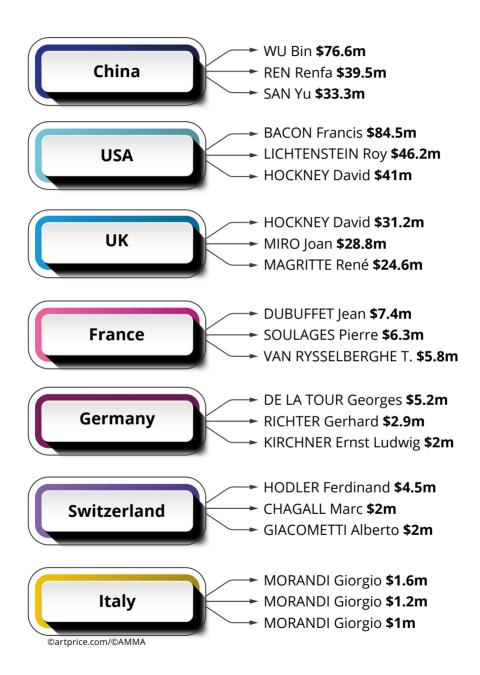

Several indicators illustrate the resilience and energy of the market, notably the stability of the number of new records and of lots sold above estimates. Overall, art prices have not been undermined.

Artprice: The average price is up to \$288,800 among oil paintings and contemporary artworks, and \$78,600 among traditional Chinese paintings. How can this difference be explained?

AMMA: Among traditional Chinese art, 20th century paintings and calligraphy account for the highest proportion, mainly

made by late masters. Even though they have highly circulated throughout the market, these works are limited in numbers, especially for ancient paintings and calligraphy. On the contrary, oil paintings and contemporary artworks are made by living artists and, compared with traditional paintings, can be continuously and increasingly created. In addition, the primary market is constantly promoted by agents and representatives, which will increase the future market value of new artworks. Therefore, contemporary artists have greater influence than dead artists who are only available on the secondary market. This also applies to the Western contemporary art market over the last two or three decades. The total auction turnover and even unit prices of the contemporary art market have gradually exceeded that of the traditional painting market. This is the development observed for the global art market.

THE BEST RESULTS BY COUNTRY (2020)

WHO WAS IN DEMAND IN 2020? AND WHO WASN'T?

The best results by country

The best results in 2020 illustrate the power of the Chinese and American markets, the only two countries generating results above \$50 million. Though both at the top, these two markets remain singular. In the USA, works by artists active in the second half of the 20th century dominate the Fine Art auction market whereas, in China, Old Masters are still dominant.

David Hockney is the only artist present on two podiums, those of the United States and the United Kingdom. Hockney came in 5th worldwide ahead of Jean-Michel Basquiat and Andy Warhol. He is one of the most essential artists of the Art Market, extremely in demand and among the most highly priced with an annual turnover approaching \$132 million. In February 2020, his *The Splash* (1966) sold for \$29.9 million at Sotheby's in London, adding no less than \$24.5 million to its price in 2006 (\$5.4 million at Sotheby's London).

In the rest of Europe, where the market is structured differently, the best results rarely exceed \$10 million. In 2020, France's best result emerged from one of Christie's 'relay sales' when a work by Jean Dubuffet, *Pourlèche fiston* (1963), fetched \$7.4 million. On 10 July, it was presented by Christie's Parisian branch as part of Christie's international *ONE* sale (China Hong Kong, Paris, London and New York), which replaced the prestigious New York sales.

Germany recorded the second best result in its auction history thanks to a painting by Georges de La Tour, which fetched \$5.2 million at Lempertz in Cologne (*La Fillette au brasier*, formerly in the Bischoff collection). Apart from this excellent result, the German market saw lots of works valued above \$100,000 (a

few dozen more than in 2019) with signatures like Richter, Nitsch, Nolde, Polke and Rainer, but also Tony Cragg and Cy Twombly.

Artprice: On 8 October 2020, Ren Renfa's Five drunken princes returning on horseback was sold for \$41 million at a Sotheby's auction in China Hong Kong. In 2009, Christie's sold this work for \$6 million in China Hong Kong. Can you describe the changes between the two auctions?

AMMA: Collectors nowadays are increasingly aware of the differences between rare and common artworks. The price that Ren Renfa's Five Drunken Princes Returning on Horseback fetched when it first appeared on the market in 2009 remained quite low because collectors were still bidding conservatively and cautiously, as all the information was not widely propagated. At that time, the art market did not have a clear understanding of the importance of this work, and not many collectors had the desire to acquire it. Therefore, there was no sign of strong market competition. But since then, many exhibitions, publications and marketing efforts were provided and the art of Ren Renfa became widely recognised among academics and collectors, which subsequently increased its value. After more exposure and wider recognition, the fierce competition among collectors has caused great changes in its price.

Declining performances

In times of crisis it is always more difficult (or at least feared to be) to resell major artworks, and there is usually a notable drop in the number of masterpieces consigned, resulting in a sharp contraction of turnover on some of the world's most expensive artists. However, in this crisis, the value of these signatures does not appear to have been undermined. Moreover, despite the obvious slowdown in the market in 2020 and the decline in their sales turnover, some of most solid Contemporary artists maintained their positions in the annual turnover ranking. This was true for Yoshimoto Nara, Yayoi Kusama, Alberto Giacometti, Keith Haring and Pierre Soulages, who are still among the 50 best-selling artists in the world, all periods combined.

On the other hand, some artists, includ-

ing a number of particularly hot signatures, posted striking under-performances in 2020. Julie Mehretu's annual turnover dropped by 99.6% (with none of her good works offered), as did Mark Tansey's (-98%) after his only work likely to generate a 7-digit result was bought in. Rudolf Stingel's annual total shrank by 83% with four fewer paintings vs. 2019 and the totals for Philip Guston (-82%), Christopher Wool (-70%) and Mark Bradford (-61%) all shrank substantially.

Likewise for certain big name sculptors. Auction turnovers collapsed for Berlinde de Bruvckere (-98%), whose only major sculpture offered was a plaster work entitled Kooi (1990), for Louise Bourgeois (-65%) in the absence of a work as strong as her Spider (which sold for \$32 million last year at Christie's New York), and for Jeff Koons (-97%), holder of the title 'most valued living artist' since 2019 (after his Rabbit fetched \$91 million at Christie's New York). For these artists - whose works sell for millions of dollars - a single work can dramatically change their positions in the rankings. Without the sale of his iconic Rabbit, Koons' position in the 2020 global turnover ranking fell from 15th to 388th.

The revelations of the year

Against all expectations, the crisis has not slowed the arrival of young artists onto the auction market; on the contrary. In 2020, a thousand new artists, born after 1980, took their first steps on the secondary market compared with just under 900 in 2019.

That new names attract attention is nothing new. However, the price levels that have been reached recently are indeed surprising. Certain "prodigies" find themselves propelled to price levels markedly higher than those of better-known Contemporary artists. Nowadays, when a young artist stands out, backed by good reviews and a powerful exhibition, there are far more buyers willing to spend big money than there were in the past.

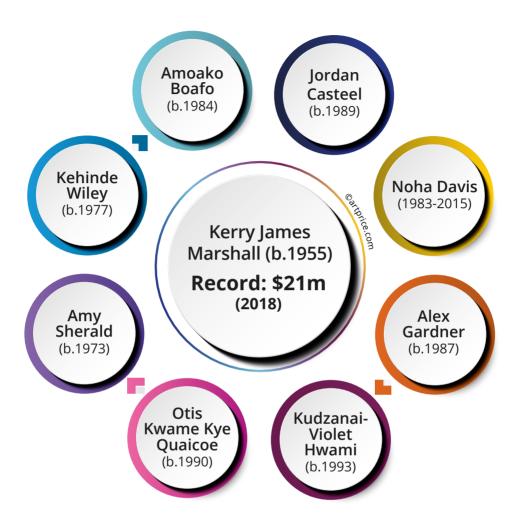

In 2020, one case stood out particularly on the Ultra-Contemporary market (i.e. artists born after 1980): Matthew Wong. None of his works were auctioned before his tragic death in 2019. But in 2020, his œuvre generated more than \$26 million from 24 lots! The artist obtained his highest auction price at a Sotheby's sale in June for a work titled *The Realm*

of Appearances. Estimated \$60,000 - 80,000 it was hammered down after a battle between 59 potential buyers... for \$1.8 million! Hailed as "one of the most talented painters of his generation" by Roberta Smith (art critic for the New York Times), Matthew Wong has been absorbed *post-mortem* by a market always enthusiastic to adopt new myths.

Breathtaking auction results were also hammered for various young artists whose works deal with some of the political and social themes of our era: themes of racial, sexual and gender identity, explored, notably, by the thirty-something artists Christina Quarles (b. 1985) and Salman Toor (b. 1983). First appearing at auction in 2018, a Christina Quarles work (Tuckt) fetched \$655,200... more than six times its high estimate at Phillips New York on 8 December 2020, Making his secondary market debut in 2020, Salman Toor climbed even higher. Born in Pakistan and established in the United States, the artist was scheduled to have a first museum exhibition at the Whitney... but the pandemic decided otherwise. However, when his Rooftop Party with Ghosts 1 was offered at Christie's New York with an estimate of \$100,000 - 150,000, it sold for a remarkable \$822,000. His figurative paintings with queer characters are very much in tune with current demand. From #MeToo to Black Lives Matter, social and cultural upheavals are impacting the Art Market more than ever.

The market remains very buoyant for African artists and artists of African descent due to their recent recognition by American cultural institutions which have been conducting a policy of solidarity towards the 'BIPOC' communities (black, indigenous, people of color) that has become a new imperative for governance and acquisitions. Some museums have allocated special funds to the purchase of works by BIPOC artists from the 20th and 21st centuries. The MET is one, having committed \$10 million for this purpose. This bold search for a more inclusive and equitable society was accentuated in 2020 with Black Lives Matter, leading certain institutions to sell works by white artists, often male, to allow the diversification of their permanent collections. Two years after Kerry James Marshall's Past Times fetched a record of \$21.1 million at Sotheby's, we take a look at some of the new signatures' electrifying sales in 2020:

THE NEW METEORS

One of the strongest results was hammered for Amy Sherald (b. 1973), an unavoidable signature since she painted the official portrait of First Lady Michelle Obama in 2018, and who has been represented since then by Hauser & Wirth. On 7 December, Phillips sold her painting The Bathers (2015) for \$4.26 million, at 21 times its high estimate! With that result Amy Sherald dwarfed another result for a work by Barack Obama's official portrait painter, Kehinde Wiley (b. 1977), whose Portrait of Mickalene Thomas, the Coyote fetched just \$378,000 the same day. But Amy Sherald is much rarer on the market. Collectors have also focused on emerging signatures, such as the Ghanaian artist Amoako Boafo.

Amoako Boafo (b. 1984)

In December 2019, his colourful portraits celebrating black identity fetched around \$50,000 on Mariane Ibrahim's booth at Art Basel Miami Beach. A year later, their value had multiplied by ten. In February 2020, the art media made much of the sale of his canvas *The Lemon Bathing Suit* for \$881,500 at Phillips. An exorbitant price for an auction debut and especially for a work estimated \$40,000 - 65,000. Some commentators may have been tempted to see the result as a flash in the pan... but it wasn't. Supported by rich and influential personalities, courted by the fashion world and dubbed by museums, Boafo has become unavoidable. His 32 paintings

presented at auction in 2020 all sold very well, sometimes at ten times their estimates. This was the case of *Baba Diop*, a 2019 canvas that fetched \$1.15 million on 2 December at Christie's China Hong Kong.

Otis Kwame Kye Quaicoe (b. 1990)

At just 30 years old, Otis Kwame Kye Quaicoe has several points in common with Boafo. Originally also from Ghana, he excels in the art of portraiture and collaborated with the Roberts Projects gallery which hosted his first solo exhibition on American soil at the beginning of 2020 (Black Like Me). His work was rapidly sold to a number of important private collections before being auctioned in early July. Like Boafo, his prices soared immediately. Estimated at \$20,000, his canvas Shade of Black ended its course at Phillips at \$250,000. The following six canvases all sold above the high estimates, including in China Hong Kong.

Kudzanai-Violet Hwani (b. 1993)

The success of Kudzanai-Violet Hwani follows the same trend. Born in Zimbabwe in 1993, trained in London (Wimbledon College of Arts) and supported by the Victoria Miro gallery, Kudzanai-Violet Hwani develops figurative works imbued with a multi-culturalism highly prized by the current market. Introduced to the secondary market at the end of 2020, she attracted a bid of \$252.000 (again at Phillips) for her *Eve on psilocybin*, a painting completed in 2018. The work was acquired for seven times its mid-range estimate.

The American artists Jordan Casteel, Noah Davis, Alex Gardner, Amy Sherald and Kehinde Wiley, who share the same ambition to produce work that explores black identity in the United States, all hammered new records. First seen at auction this year, Alex Gardner (b. 1987) attracted a bid of \$170,100 against a high estimate of \$30,000 (*To be titled*, Phillips, 8 December). At the same auctioneer's *New Now* sale on 4 March, a painting by the "mad genius" Noah Davis (1983-2015) titled *In Search of Gallerius Maximumianus* sold for five times its high estimate at \$400,000, just 15 days after his posthumous exhibition at the

David Zwirner gallery. On 12 February, a painting by Jordan Casteel (b. 1989), named one of Forbes magazine's most influential "30 under 30" in 2019, rocketed to \$668,000 at Christie's in London.

Very involved in the Ultra-Contemporary market, Phillips hammered most of these new records. At its sale *New Now New York* (30 September 2020), Phillips offered and sold works by six new artists, including *Homegrown* by Arcmanoro Niles (\$23,750, nearly eight times its low estimate); *Tankstelle* by Melike Kara (\$32,500, three times its low estimate) and *Wishful Thinking* by Van Hanos (\$15,000 versus a low estimate of \$4,000). Although the sales took place in New York, the thirst for novelty is not restricted to American collectors. The bidders were from nearly 50 different countries.

The Contemporary art market – which represents 16% of total global Fine Art secondary market turnover – is substantially based on these recent works. In fact, no less than 13% of the entire secondary art market today depends on works created after 2000. A proportion that is naturally bound to increase...

2020 - THE YEAR IN REVIEW

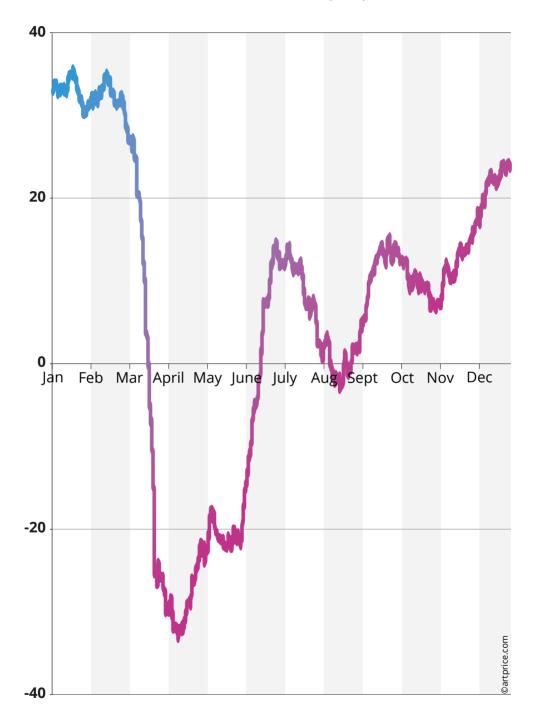

Inclinations towards social solidarity, collaborations between galleries and between auction companies, innovations in sales formats, the development of digital tools... The art world has quickly adapted to the constraints of a life "at a distance". We look back, month by month, at the high-points of a resilient art market facing unprecedented challenges linked to the health crisis.

February 4-5 February Impressionist, Modern and Surrealist sales at Christie's and Sotheby's post contractions (-38% vs. 2019). Success nonetheless for Magritte with seven works fetching over \$39 million at Christie's (68% of the turnover at Christie's Surrealist sale). Records for 11 February Tamara de Lempicka (\$21.2 million, At the height of his fame, David Hock-Portrait de Marjorie Ferry) as well as for ney's The Splash raises \$29.9 million at George Grosz (\$12.6 million, Route Sotheby's in London, more than eight Dangereuse). times its 2006 price. Sotheby's Contemporary Art sale takes \$120 million. ahead of Christie's total of \$72.7 million 16 February for its 12 February session. Expansion of Frieze in Los Angeles. This second edition (with Perrotin, Pace, Zwirner, Ropac, Hauser & Wirth, among others...) attracts major collectors from Asia, the Middle East, Europe and Latin America as well as celebrities, including Jennifer 20 February Lopez, Leonardo DiCaprio and Na-Following the cancellation of Art Batalie Portman. sel China Hong Kong, Art Basel Asia's Director, Adeline Ooi, announces a fully digital edition of the fair with access days reserved for VIPs (as with the physical fair). ARTPRICE'S ART MARKET CONFIDENCE INDEX IN 2020 (AMCI)

March

The Pace, Acquavella and Gagosian galleries join forces to buy the collection of billionaire Don Marron (valued at \$450 million) against Sotheby's, Christie's and Phillips who guaranteed \$300 million to the collector's widow.

2 March

Cancellation of the Tokyo Art Fair and closure of museums in Japan to contain Covid-19. First closure of the Louvre museum whose staff, worried about the progress of the epidemic, exercise their 'right to withdraw'.

11 March

The WHO declares pandemic status. TEFAF Maastricht cuts short its edition in emergency after the discovery of an infection among the exhibitors.

15 March

The advance of the pandemic prompts cancellation of Beijing's Gallery Weekend; the organizers step up their digital initiatives with live broadcasts and videos.

19 March

Cancelled, Art Basel Hong Kong opens its online preview. A victim of its own success, the site is saturated for 10 minutes.

31 March

Lockdown causes a thirst for culture and online visits to the Louvre museum explode, from 40,000 to 400,000 visitors per day.

9 March

The fair Art Paris announces a first postponement to May as the limit of authorized gatherings was reduced to 1,000 people in France. The fair was subsequently postponed again to September. PAD Paris and World art Dubai are also postponed.

12 March

Postponement of the first edition of Paris Photo NYC and Aipad NYC. Cancellation of the Contemporary art fair *Ch.aco* that had already been postponed due to Chilean social unrest.

17 March

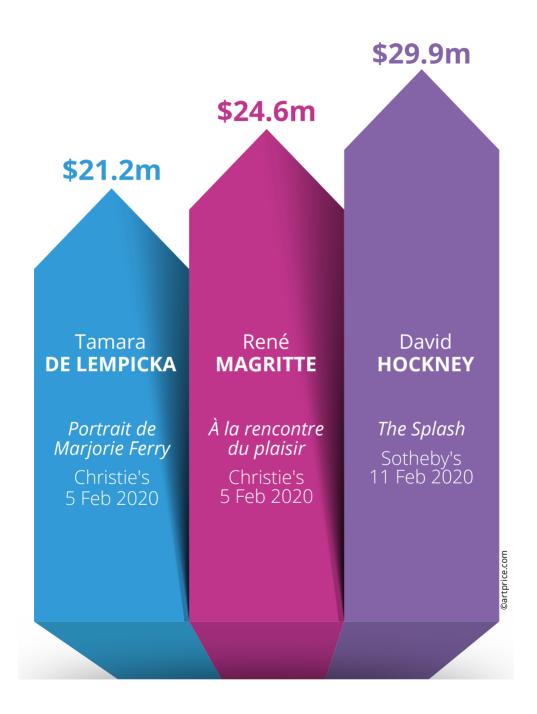

European countries enter lockdown: cultural events, exhibitions, fairs, auctions are cancelled or postponed. The Drouot auction centre prepares to close its doors.

The online auction site Paddle8 files for bankruptcy.

24 March

The Biennale of Sydney announces its first major virtual biennial accessible online via Google Arts & Culture, while its physical exhibitions are forced to close.

TOP 3 RESULTS IN Q1 2020

April

The American Association of Museum Directors (AAMD) relaxes its rules on the alienation of collections and allows museums to sell works "to pay for expenses related to the maintenance of its collections."

1 April

The Frieze launches its digital platform following the cancellation of its New York edition. In addition to online viewing rooms, a new augmented reality (AR) tool is added to help visualize artworks in situ.

6 April

Sotheby's announces the maintenance of its face-to-face 'live' sales in May. The Art Market holds its breath while awaiting the response from other major auction houses on this point.

21 April

Contemporary Curated generates \$6.4 million, the best result recorded by Sotheby's for an online sale.

3 April

A wind of solidarity blows through the art world. Gallery David Zwirner opens an online viewing room (Platform: New York) hosting 12 New York galleries. Hauser & Wirth also commits to donating 10% of its online sales to the WHO.

In Paris, Piasa's #protegetonsoignant solidarity sale raises \$2.9 million, including \$250,000 for a painting by the young French artist Claire Tabouret (Les Débutantes).

18 April

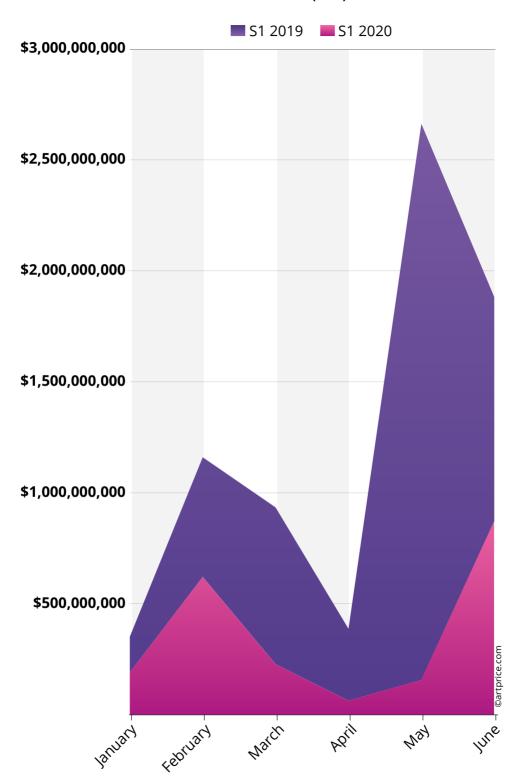

China Guardian organizes online sales and uses the Wechat network to encourage private sales.

27 April

Sotheby's launches a marketplace for galleries - Sotheby's Gallery Network - hosting in particular the Shaiman, Lehmann Maupin, Petzel and Sperone galleries.

The American company dismisses 12% of its workforce in April and temporarily cuts wages by 20%.

MONTHLY FINE ART SALES TURNOVER IN THE WEST (2020)

May

13 May

Christie's and China Guardian join forces to launch a series of sales and exhibitions dubbed 2020+ in Shanghai.

20 May

Christie's is forced to cut costs. The newspaper *Le Monde* reports that the company laid off 300 employees, or 40% of its teams, in Europe and that 500 employees have agreed to 20% cuts in their salaries.

3 June

Germany releases £1 billion for the benefit of arts and culture as part of a stimulus package entitled "A new start for culture".

29 June

Sotheby's organizes a behind-closed-doors auction, broadcast for the first time live on Museum TV, a TV channel devoted entirely to art. A Francis Bacon triptych, *Inspired by the Oresteia of Aeschylus* (1981) and owned by Hans Rasmus Astrup, fetches \$84.5 million. Before this mega-sale (which apparently attracted more than 150,000 viewers), Sotheby's guaranteed the work (i.e. with a sum promised regardless of the auction result) to convince the Norwegian collector to consign the work. The overall sales total is close to \$380 million.

15 May

Olivier Miro launches the innovative platform Vortic at the service of galleries, which allows users to virtually exhibit works at home via augmented reality (AR) and virtual reality (VR).

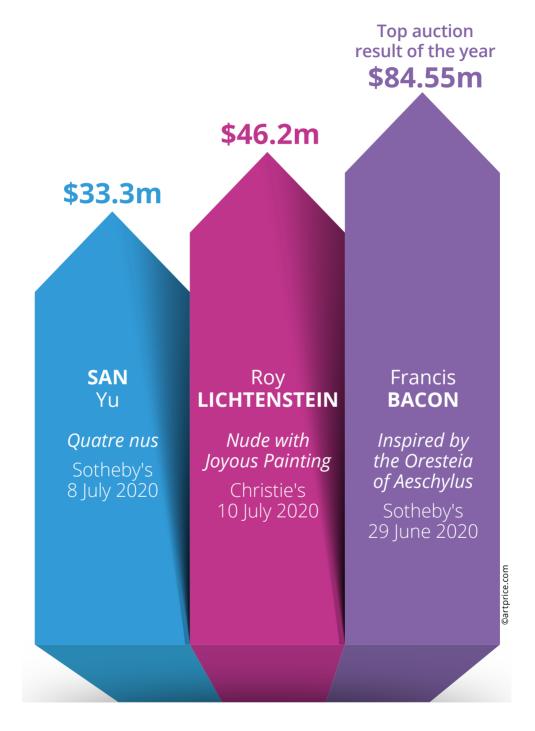

June

New York sales are broadcast online worldwide. The price levels are unprecedented for behind-closed-door sales.

8 June

The Swiss edition of Art Basel is held exclusively online. The David Zwirner gallery announces the sale of four works above the million threshold via the Internet platform of Art Basel, including a *Balloon Venus* by Jeff Koons, sold for \$8 million.

TOP 3 RESULTS: SUMMER 2020

July

6 July

The Rodin Museum in Paris decides to triple the number of works offered for sale (130 vs. 40 per year usually) to offset its economic losses.

8 July

Sotheby's sells a major San Yu painting - *Quatre nus* (1950) - for \$33.3 million in China Hong Kong, as part of a Modern Art session totaling \$106.5 million.

10 July (

Christie's launches *ONE*, an auction broadcast simultaneously live from China Hong Kong, Paris, London and New York using innovative streaming technology. Four auctioneers officiate at the same time. The method induces competition between the different adjudicators. *ONE* exceeds \$420 million in turnover, including more than \$46 million for Roy Lichtenstein's *Nude with Joyous Painting* (1994).

28 July

Sotheby's From Rembrandt to Richter sale totals nearly \$200 million, including \$18.8 million for a Rembrandt self-portrait. In total, Christie's, Sotheby's and Phillips raise \$825 million from their hybrid sales.

August

Phillips becomes the exclusive partner of the company Articker, a database analyzing the media coverage of more than 150,000 artists. Phillips thus clearly intends to identify the most promising artists.

September

14 September

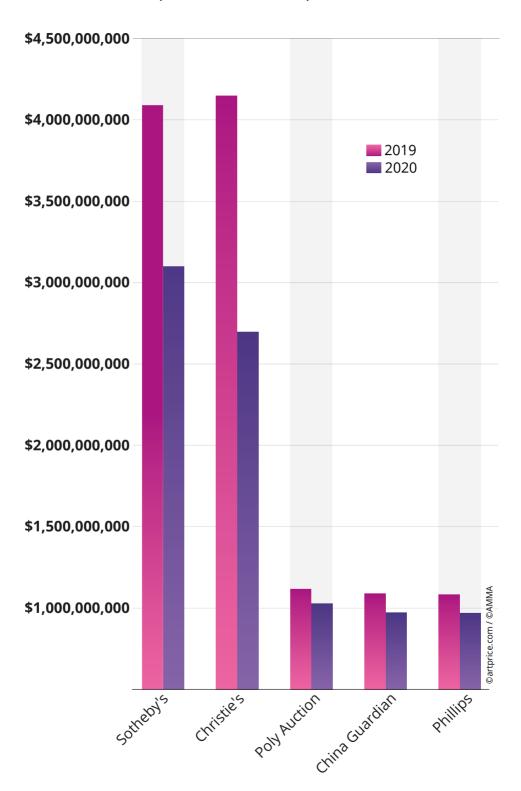

Despite the good attendance figures at Art Paris (September 10-13) down only 10%, the FIAC is cancelled.

September 18

The Louvre announces financial losses of €59 million following a historic drop in attendance.

At the end of September, Germany releases massive emergency aid of €16 million intended for the acquisition of works of art. German galleries can benefit from a maximum support of €35,000 as long as they have been in existence for three years.

TOP 5 AUCTION HOUSES (2020 TURNOVER VS. 2019)

2 October

David Zwirner holds an auction with over 100 star artists, including Richard Serra, Kehinde Wiley, Jeff Koons and Ed Ruscha, to raise funds for Joe Biden's campaign.

6 October

Sotheby's mixes Modern and Contemporary Art in China Hong Kong, in an online-offline sales format connecting the auction rooms in China Hong Kong, London and New York. The sale is broadcast live on French television channel Museum TV. Total turnover: \$88.2 million.

15 October

In the framework of the easing of the deaccessioning rules in the United States, the Brooklyn Museum disposes of 12 works from its collection for a total of \$20 million at Christie's, including *Lucrèce* by Cranach (\$5 million).

28 October

Sotheby's Impressionist & Modern Art sale takes \$141 million. Its Contemporary Art sale offers a heady mixture of art genres and objects (including three Alfa Romeo prototypes generating nearly \$15 million) for an overall total of \$142.8 million.

10 November

Artprice's Art Market Confidence Index rises by 60% in four days following Joe Biden's victory in the US presidential election and the announcement of the arrival of an effective vaccine against coronavirus. Stock exchange indices rise sharply.

October

The West faces a second wave of Covid 19. In New York, a partial lock-down slows the return of confidence in the Art Market.

5 October

Sotheby's Modern Art sale in China Hong Kong totals \$97 million. An oil on cardboard by Wu Guanzhong fetches \$19.5 million.

7 October

Christie's obtains \$36.4 million for its Contemporary Art sale. A work by Matthew Wong estimated at \$500,000 sells for \$4.47 million (*Shangri-La*).

18 October

Poly Auction celebrates its 15th anniversary with a record \$76.6 million for Wu Bin (*Views of a Lingbi stone*). This is the highest amount ever hammered for a work of traditional Chinese calligraphy.

November

Germany's Federal government increases its acquisition budget for artists to \$3.6 million. German gallery owners call for a reduction in sales tax from 19% to 7%.

22 November

Success of Shanghai Art Week and its two physical exhibitions, West Bund Art & Design and Art 021. For the occasion, the government of Shanghai commits to facilitating transactions and the transport of works through "accommodating" taxes.

December

Instagram facilitates access to augmented reality (AR) through an unprecedented collaboration with the Réunion des Musées Nationaux Rmn-Grand Palais, the Palace of Versailles, the Perrotin Gallery and the Smithsonian.

2 December

Christie's (New York-China Hong Kong) sale blends Modern and Contemporary Art. Young African artist Amoako Boafo attracts a bid of \$1.1 million. Christie's also sells San Yu's *Goldfish* canvas for \$21.9 million. Highlight of the autumn sales, *ONE*, takes \$119.27 million with 90% of the lots sold (97% in value terms).

7 December

Phillips records the best total in its history for a Contemporary Art sale: \$134.6 million, 25% more than in 2019 at the equivalent sale. Highlight of the sale, David Hockney's landscape, *Nichols Canyon* (1980), fetches \$41 million.

19 December

Marian Goodman closes her gallery in London.

21 December

In the UK, a mutation of the coronavirus concludes a difficult year. This more contagious variant prompts British Prime Minister, Boris Johnson, to close the country's borders.

3 December

The joint 20th Century & Contemporary Art sales of Phillips and Poly Auction total \$65.5 million. Streamed live from China Hong Kong, these sessions produce a combined sales rate of 94%.

Phillips sells Matthew Wong's *River at Dusk* (2018) for nearly \$5 million.

8 December

Sotheby's hosts another hybrid sale, mixing Impressionist, Modern and Ultra-Contemporary Art (\$63.4 million from some 20 lots). A Calder mobile (*Mariposa*) fetches \$18.2 million, no less than \$10 million above its high estimate.

The Lempertz auction house in Cologne sets a world record for an extremely rare Georges de La Tour (*La Fillette au brasier*, \$5.2 million, formerly in the Bischoff collection). It's the second most expensive work in German auction history after a painting by Max Beckmann, sold in 2018 by Grisebach.

In France, the company Interencheres (a consortium of 320 French auctioneers) acquires Auction.fr (430 partner auction houses, of which 64% have activities outside France) in order to expand its international clientele.

ABOUT ARTPRICE BY ARTMARKET

With over 20 years of regulated financial communication on Eurolist, ArtMarket.com and its departement Artprice, makes it a point of honor to provide financial market professionals and Art Market neophytes alike with all necessary information. All questions asked by ArtMarket.com's 18,000 shareholders are systematically answered in Artprice's regulated information published online by its AMF-approved agent

http://www.actusnews.com.

Artprice by ArtMarket.com is the global leader in art price and art index databanks. It has over 30 million indices and auction results covering more than 750,000 artists around the world. Artprice Images® gives unlimited access to the largest Art Market resource in the world: a library of 126 million images or

prints of artworks from the year 1700 to the present day, along with comments by Artprice's art historians.

Artprice permanently enriches its databanks with information from 6,300 auctioneers and publishes a constant flow of art market trends for the world's principal news agencies and approximately 7,200 international press publications, as well weekly articles published online in the ArtMarketInsight section, to keep its users updated on what's trending on the art market. For its 4,500,000 members (members log in), Artprice gives access to ads posted by members. This space represents the world's leading Standardised Marketplace® for buying and selling art. These sales take place under two systems: either fixed price sales or auction-sales (regulated by paragraphs 2 and 3 of Article L 321.3 of the French Code of Commerce).

Artmarket.com is listed on Eurolist by Euronext Paris, SRD long only and Euroclear: 7478 - Bloomberg: PRC - Reuters: ARTF.

ABOUT AMMA

A Professional and Authoritative Chinese Artwork Market Data Service Platform and Research Institution.

Art Market Monitor of Artron (AMMA) is an independent third-party Chinese artwork market data service platform of Artron Art Group, focusing on data search, artwork valuation, AAI (Artron Art Index), data reporting and other relevant services of the Chinese artwork market. It concentrates on the data monitor of the Chinese art market, analysis and investigation of the Chinese art market, return of art investment, and artwork valuation consultation service. Our research and consulting services are on the basis of China's first and most comprehensive database, Artron's Chinese Artworks Database. recording over 6,800,000 Chinese artworks auction results from over 33,000 sales, with high-definition images and complete illustrative information from over 1,000 auction houses since the first art auction hammer was knocked in China in 1993, as well as Chinese artworks sold overseas. Based on

such valuable data resources focused on Chinese art, AMMA has developed successful data products such as AAI, Chinese Art Auction Market Annual/Season Report, and Chinese Artwork Valuation Service, etc. AMMA promotes the analysis art market of transaction from traditional empiricism to a new stage that pays more attention to data mining and quantitative analysis.

With its powerful database and its expertise in art market data analysis that establishes its authority, AMMA has become the most important partner of the government, institutions, auction houses and media organizations in art related fields in China — the main partnerships include the Ministry of Culture and Tourism of the PRC, Beijing Municipal Bureau of Culture, the Palace Museum, the Shanghai Municipal Administration of Culture and Tourism, and the Art Financial Research Institute of Renmin University of China, Artsecnomics, as well as Larry's List and the world famous art market database & market place Artprice.com.
